## NOTES

- Comment
- Not fitted components are marked as **X**
- DRAFT** - Very early stage of schematic, ignore details.
- PRELIMINARY** - Close to final schematic.
- CHECKED** - There shouldn't be any mistakes. Contact the engineer if you find any.
- RELEASED** - A board with this schematic has been sent to production.

Date: 11-Jun-2026

## DESIGN CONSIDERATIONS

DESIGN NOTE:

Example text for informational design notes.

DESIGN NOTE:

Example text for debug notes.

DESIGN NOTE:

Example text for cautionary design notes.

DESIGN NOTE:

Example text for critical design notes.

LAYOUT NOTE:

Example text for critical layout guidelines.

|                |                                                                                                                                                                                                                                                           |      |                                                                                                                                             |
|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|---------------------------------------------------------------------------------------------------------------------------------------------|
| Project        | Simplified electronic project designed to verify practical skills in electrical engineering, PCB design, electronic assembly, embedded software implementation, and programming within the Microchip Technology development environment. Simple powering. | MEET | The project is a simple LED light effect device with a user interface realized using a capacitive touch sensor. Powered by USB-C Connector. |
| MAIN OBJECTIVE |                                                                                                                                                                                                                                                           |      |                                                                                                                                             |

|    |                                                                                            |      |                                                                                                                              |
|----|--------------------------------------------------------------------------------------------|------|------------------------------------------------------------------------------------------------------------------------------|
| 1  | The project shall contain very small integrated circuits.<br>Pitch less than 1mm           | MEET | IC: Cap sensor : AT42QT1012 : SOT-23-6 package : PITCH: 0.95<br>IC: uC : Attiny-204 : SOIC-14_3.9x8.7mm_P1.27mm : PITCH 1.27 |
| 2  | The project shall contain 0805 SMT passives components.                                    | MEET | Device contain multiple 0805 SMT elements.                                                                                   |
| 3  | The project shall contain multi-pin integrated circuits to verify soldering precision.     | MEET | IC: Shift register : STP16CP05MTR : SO-24 : 24 pins<br>IC: uC : Attiny204 : SOIC-14_3.9x8.7mm : 14 pins                      |
| 4  | The project shall contain an UPDI programming interface for firmware upload and debugging. | MEET | uC Attiny204 with UPDI programming interface                                                                                 |
| 5  | Possibility to program using Microchip enviroment and pickit-4 programmer.                 | MEET | It is possible to program the device using pickit-4 and MPLAB software.                                                      |
| 6  | Shall contain at least two status led.                                                     | MEET | Status LED'S : LED1, LED2.                                                                                                   |
| 7  | Shall be able to interact with user.                                                       | MEET | The user can change the light effect using a capacitive touch sensor.                                                        |
| 8  | Shall be easy to power up.                                                                 | MEET | Powered by USB-C connector with general mode                                                                                 |
| 9  |                                                                                            |      |                                                                                                                              |
| 10 |                                                                                            |      |                                                                                                                              |
| 11 |                                                                                            |      |                                                                                                                              |
| 12 |                                                                                            |      |                                                                                                                              |

# [8] Revision History

Version 2.1.0 - 2026-05-02

- Added
- First version of PCB and Schematic

Version 2.1.1 - 2026-05-21

|  |                                   |                                          |                          |                              |                                  |
